

Worksheet Part W6: the $p = 3$ tables

accompanying *Mild p -class tower groups of imaginary quadratic fields*

This document is generated from the result records by `generate_tables_p3.py`.

Part W6: the $p = 3$ tables

The 864 mild fields at $p = 3$ with $|D_K| < 2^{30}$, with the class group, the rank of δ , and the source of mildness; the three tables follow the blocks of the computation. Additional records: the Anick witnesses in `records/p3/results/anick-scan-f3.json`, the two below 2^{28} also in `records/p3/results/block-witnesses-002.json`; the Gröbner verdicts, including the 26 fields that are provably not strongly free and the single field with a rank-two tensor, in `records/p3/results/strong-freeness-block-001.json`, `records/p3/results/slice2-strong-freeness.json`, and `records/p3/results/block23-strong-freeness.json` — every decided verdict was produced by both engines (appendix C.3 of the paper); the cone-criterion reports with the transverse cone point of every criterion field in `records/p3/cone-criterion/`. The drivers are `tools/strong-freeness/block_sweep.py`, `tools/strong_freeness_singular.py`, and `tools/p3_cone_criterion.py`. The exhaustive Anick searches over all 11 232 changes of variables over $\mathbb{F}_3$ and over all 663 390 ordered projective bases over $\mathbb{F}_9$, carried out for each of the 12 244 fields on which the cone criterion is silent, are recorded in `records/p3/results/anick-scan-f3.json` and `records/p3/results/anick-scan-f9.json`; both searches produce witnesses for exactly seven fields.

Table 3: the mild fields with $|D_K| < 2^{28}$
